Mapping with communities, international workshop

CALL FOR PARTICIPATION

Are you working with <u>communities</u> and <u>mapping</u> their interests?
Are you developing methodologies to <u>engage communities with mapping</u>?
Or, are you using digital technologies to help communities to
<u>generate</u> and <u>analyse</u> <u>geospatial</u> data?

Join our "Mapping with communities" workshop at the GIScience 2023
conference on September 12 and share your experience with us.

Come along and have a great time with our community. We plan to discuss current and emerging challenges of engaging communities with mapping and GIScience. Come and share your experiences of qualitative and mixed approaches to participatory mapping, especially your concerns with fair, accountable and transparent research. Help us build synergies around **participatory mapping, citizen science**, and enabler **technology**.

If you or your work is related to one or more of the underrepresented communities, geographic regions, disciplines and ethnicities, please get in touch, so we can explore other alternatives to ensure your participation.

We want to hear from you about the ethical implications of mapping with communities and link it to <u>IDEAMAPS</u>. Submit your contribution to <u>Diego.PajaritoGrajales@glasgow.ac.uk</u> by August 11 2023, in one of the following formats:

- ☑ Position papers or briefings between 1500 and 2500 words
- ☑ extended abstracts, up to 1500 words

Use the <u>conference templates</u> to format your contribution. All accepted contributions with be compiled as workshop proceedings in <u>ceur-ws.org</u>.
